EDUCATION

M.A. Leadership

Kairos University
2022 – Present

Theological Studies

Theologisches Seminar Rheinland
2003 – 2007

LANGUAGES

German · native

English · C2, fluent

ONGOING

Independent Consultant

Oratio&Co

2016 – Present · Remote

Collaborative leadership coaching; design-thinking and product-strategy consulting for non-profits, religious organisations, and mission-driven ventures.

PROFILE

Currently at Bibel TV in the AI-first builder pattern inside a Head-of-Product-Design title. Shipped there: an AI fundraising ecosystem built solo, a customer-support Copilot skill in production, and a design-system-as-API live across Android and Figma. 15+ years across Datameer (five-year cross-Atlantic tenure), Ninox (SLT + prompt-to-database with the CEO), ChurchDesk, and Hypoport Hub SE.

EXPERIENCE

Head of Product Design

Bibel TV (B2C media platform across mobile, web, and connected TV) Hamburg (2 days/week) + Berlin (Remote), Germany 2025 – Present

- Built the AI fundraising ecosystem end-to-end, solo — analysis, prompt engineering, prototype, and skill work all shipped by me
- Analysed past fundraising letters and their performance to identify seasonality and style patterns separating over- from under-performers
- Encoded the analysis and style guide into a Claude Project with a multi-turn clarifying-question loop before generation, not single-shot
- Built an internal web prototype the fundraising team uses to generate follow-up content
- Built a Claude skill producing follow-up content across three customer-facing surfaces — in-app notifications, web banners, and video scripts
- Shipped a customer-support Copilot skill (MS Copilot platform) that drafts responses to viewer letters and emails against the CS handbook as context
- Scoped what the skill loads and defined "good draft" with the CS team before prompt-tuning — kept the human send-decision absolute
- Made escalation a first-class output for sensitive and acute-crisis messages — routes out rather than drafts
- Live in production, introduced through a self-testing week then 1:1 sessions with the CS team
- Adopted qualitatively across the whole team, including the most sceptical members
- Introduced agentic engineering as design practice — new Bibel TV experience prototyped first for web, then Android, using Claude Code on real APIs and content
- Engineering copies and adapts component structures, API calls, and navigation patterns from the prototype code into the production codebase
- Parts of the code land, edited by engineering, then ship
- Iteration collapsed from days through spec-and-handoff to hours in working code
- Actively evangelising the practice across the team
- Established the design system as an API — DTCG-standard token repository with a three-tier hierarchy (global primitives → semantic → component)
- Style Dictionary build with multi-platform sync — Android live, Figma live via plugin, iOS/web endpoints ready
- Architecture supports server-driven UI
- One commit propagates to every platform automatically — consistency enforced by structure, not coordination
- Leading the mobile app redesign across iOS / Android / web / connected TV for engagement and retention
- Partnering with engineering on the experimentation framework and A/B testing infrastructure — actively analysing conversion rates and usage data to inform iteration
- Running the "Designing with and for AI" workshop series with the team as internal AI-adoption practice

Head of Platform and Design

ChurchDesk GmbH (European church-management SaaS across DE / DK / UK / SE / NO / CH) Copenhagen, Denmark · Remote from Berlin 2024 – 2025

- Dual PM + Design on the funeral-booking system — reframed scope from "funeral-booking feature" into a booking capability deeply integrated into the platform
- Owned build-vs-buy and standalone-vs-integrated decisions
- Designed the multi-stakeholder coordination logic from first principles (availability rules, buffer/lead-time, progressive disclosure)
- 70% coordination-time reduction (days → hours), 90% booking acceptance rate through smart filtering, 20+ cemeteries in the Hessen region
- Became a core platform feature beyond the initial region — multi-stakeholder coordination across funeral homes, pastors, cemeteries, and families
- Shipped AI alt-text generation for EU accessibility compliance in production
- Automated accessibility processes across customer-facing content under GDPR + Protestant/Catholic church data-protection law across six countries
- Delivered a suite of CS-workflow modules to help client churches automate remote processes
- Shared inbox with multi-user team-inbox routing, case-management ticket system, and booking system as core platform capabilities
- Managed 1 direct report (designer)
