

Tobias Treppmann

Target role: Senior Product Designer (AIR) · complex functional interfaces for expert users, prototyped in real code
LOCATION Berlin, Germany EMAIL hello@treppmann.design PORTFOLIO treppmann.design/for/jetbrains LINKEDIN linkedin.com/in/tobiastreppmann

PROFILE

I design complex tools for people more expert than me at the thing the tool does. Consulting for Ninox, I designed an onboarding putting a chat that builds a database beside a direct-manipulation editor — people inspect and fix what the AI generated, and it shipped as the public beta. I prototype in real code, engineering ships from it.

+153% weekly starts

the AI feature I designed full scope — input-styled entry · +85% Android, GA4

Prompt to database

chat beside direct manipulation, AI output in the real editor, Ninox's public AI beta

Five years

data-dense analytics UI at Datameer — banks, insurers, users through code-writing data engineers

EXPERIENCE

Head of Product Design

2025 – Present

Bibel TV (German broadcaster in linear-to-streaming transformation — iOS, Android, web, connected TV) Hamburg + Berlin, Germany

- Product manager, product owner and design lead for the app redesign — one seat holding product strategy, the AI roadmap and UI quality across four platforms.
- The AI feature I designed full scope more than doubled weekly starts: +153% iOS, +85% Android (GA4, four-week averages). An unclear button became a self-explaining input with five worked prompts.
- A production support copilot in house voice. Drafts follow the handbook's wording and standard phrases under an explicit restricted-topic list — and every send decision stays human. Complex multi-topic letters take minutes, not hours.
- An end-to-end AI fundraising ecosystem, built solo: analysis of which letters over-performed, a Claude Project with follow-up-question loops, a skill carrying one message into in-app, web and video.
- Prototyping in real code against production APIs, web first, then Android — and the external engineering agency ships from that code. Features are verified in production and beta, with design-side final sign-off.
- Design system as an API: a four-tier token architecture built to serve iOS, Android, web and connected TV from one source, so product managers and the external engineering partner build self-serve.
- Review of my own work is standing practice: peer and engineering review on my design work, not a milestone before handoff.
- All design documentation in English — Datameer specs for NYC colleagues, ChurchDesk handoff docs, the Bibel TV token-repo README.

Head of Platform and Design

2024 – 2025

ChurchDesk (vertical ERP for churches and dioceses — DE / DK / UK / SE / NO / CH) Copenhagen, Denmark · Remote from Berlin

- A booking capability embedded in the platform rather than bolted on. 70% less coordination time, 90% acceptance at the launch customer, then every customer.
- Churches met the European Accessibility Act deadline automatically on the sites they host — across six countries.

Head of Product Design · Interim Head of Product

2023 – 2024

Ninox Software GmbH (no-code business platform — DACH / UK / US) Berlin, Germany

- Five direct reports across product design and UX writing, on the Senior Leadership Team. I wrote the levelling framework for both disciplines, ran reviews against it, promoted two and hired two.
- Nine reports for four months while holding Product Design and Product together — three PMs and a data scientist; I then hired the consultant who became Head of Product.
- Owned the design system and established joint governance with engineering; ran the function's capacity, allocation, prioritization and process.
- Building blocks that let users create their own data-dense interfaces — dashboards, data views, complete ERP solutions — on a no-code platform serving thousands of SMEs.
- As a consultant in summer 2025, I designed the prompt-to-database onboarding directly with the CEO and technical co-founder: chat beside direct manipulation, AI output rendered into the real data-model editor, user control over AI suggestions preserved. It shipped as the public AI beta in February 2026.

Director of Design

2016 – 2021

Datameer GmbH (collaborative data analytics for top US / CA / UK banks and insurers) Berlin, Germany · team across Germany and NYC

- Five years leading the UX team — two UX designers reporting to me — for a platform serving regulated banks and insurers.
- Complex data-dense interfaces: column charts, big-data pivot tables, aggregated JSON views, result cards, filter logic — and the sampling-uncertainty problem, where a preview could show empty results even when full data existed.
- Users ranged from business users through data analysts to code-writing data engineers. I defined component behavior and specifications across the co-built design system and reached analysts through iterative screening on usertesting.com.

UX Strategy Lead

2014 – 2016

Spreadshirt (international e-commerce platform — sellers and hundreds of thousands of consumers) Leipzig, Germany

- Research overturned the executive assumption that shop owners wanted full automation — the product strategy shifted to controlled automation preserving user design control.
- The mobile product-designer prototype I led went to production, inside a product triad.

UX Manager

2013 – 2014

HairDirect (e-commerce for products with complex customization) Lancaster, Pennsylvania, USA

- The mobile checkout that produced the company's first mobile orders.

EARLIER CAREER PROGRESSION

Independent Consultant · *Oratio&Co* · 2016 – Present · remote · AI-for-design workshop series for an agency's designers and developers, late 2025 – January 2026

Senior Mentor · *CareerFoundry* · 2016 – 2026 · remote · a decade mentoring and coaching designers

Product & UX Strategist · *Hypoport hub SE* · 2021 – 2022 · Berlin / Lübeck · service-to-product transformation with the executive team of a listed group

Earlier · *UX Designer, Web Designer & Front-End Developer* · 2009 – 2013 · Pennsylvania, USA · responsive web, front end and e-commerce

EDUCATION

M.A. Leadership
Kairos University, South Dakota, USA
Completed 2026

LANGUAGES

German · native

English · C2, fluent

SKILLS

AI interaction design in production

The prompt-to-database onboarding — chat beside direct manipulation, AI output in the real editor, user control preserved · a copilot where every send decision stays human · an AI feature at +153% weekly starts on iOS, +85% Android, GA4 · Claude Code, Claude Projects and Claude skills

Complex functional interfaces

Data-dense analytics UI — charts, pivot tables, aggregated JSON views, filter logic · feedback design for sample-based uncertainty · no-code building blocks that let users create their own data-dense interfaces · four platforms held to one design language

Prototyping in real code

Production APIs, web first then Android, and engineering ships from the code · agentic engineering as design method · Android and Kotlin, SwiftUI, React and web · features verified in production and beta, design-side final sign-off

Design systems built for AI-assisted work

DTCG tokens and Style Dictionary · a four-tier token architecture built to serve iOS, Android, web and connected TV from one source · Storybook as the source of truth · Figma components, variables, auto layout, Dev Mode

Working in a team

Peer and engineering review of my own work as standing practice · a decade mentoring and coaching designers · centralized design functions with designers assigned to product teams' work · all design documentation in English · German native, English C2, Berlin
