PROFILE

I design software for people trying to get their work done, and I stay hands-on from user research through prototypes and implementation review. At Bibel TV, my AI feature redesign lifted weekly starts by 153% on iOS. Earlier, I designed Ninox's editable AI onboarding and a ChurchDesk booking workflow with an estimated 70% less coordination.

+153% weekly AI starts

redesigned AI feature on iOS · +85% on Android · GA4

70% less coordination

estimated, reusable booking workflow · 90% booking acceptance

64% from my prototype

code behind redesigned Android Home and detail views · release 6.0, in beta

EXPERIENCE

Head of Product Design

2025 – Present

Bibel TV (consumer streaming across iOS, Android, web and connected TV) *Hamburg + Berlin, Germany*

- Redesigned the AI Bible-passage feature. Weekly starts rose from 205 to 518 on iOS and 655 to 1,213 on Android, measured in GA4 over four full weeks before and after each release.
- Prototype in working code against production APIs with AI coding agents. 64% of code behind redesigned Android Home and detail views (release 6.0, in beta) comes verbatim from my prototype.
- Turned research into the redesign's direction. A concept survey of 264 existing app users named brightness and readability as the core need; I analyze interviews with Claude.
- Built a four-tier design-token system that keeps Android, iOS, web, Figma and connected TV on one source.
- Made the design system usable by product managers and Claude, with Storybook as the shared reference, a closed list of token names and checks that refuse off-system values.
- Designed, managed and built a Conversational AI Bible Study App (in development) in about two months: iOS and Android apps, a web sibling, chat and retrieval, including its in-product motion.

Head of Platform and Design

2024 – 2025

ChurchDesk (vertical SaaS for churches and dioceses across six European markets) *Copenhagen, Denmark · Remote from Berlin*

- Owned product management for the main platform and led all product design, spanning operational web and mobile workflows for non-technical professionals.
- Simplified complex funeral-booking requirements in a bounded project, two months to development release: pastor calendars, cemetery hours and buffers became one flow inside the existing calendar and form builder.
- Reduced coordination time by an estimated 70%. Booking acceptance reached 90%, and the capability shipped to the full customer base.
- Designed web surfaces for parish admins and funeral homes and the mobile calendar for priests in Figma with my designer; engineering built the web and mobile apps from those designs.

Head of Product Design · Interim Head of Product

2023 – 2024

Ninox Software GmbH (no-code business platform for SME workflows) *Berlin, Germany*

- Designed for record-based business workflows, where customers digitize processes such as construction site inspections and hand project records through their organization.
- Owned and evolved the design system across Storybook, Figma Variables, navigation, modals and searchable multi-select components; established joint governance with Engineering and defined custom easing curves, small animations and transitions.
- Freelance, summer 2025: designed prompt-to-database AI onboarding. Generated schemas open in the real editor beside chat, where users change them; this became the basis of the public AI beta.
- Five direct reports across product design and UX writing, as a member of the Senior Leadership Team.
- Analyzed thousands of community posts with Claude to find recurring pain points.

Director of Design

2016 – 2021

Datameer GmbH (enterprise data analytics for regulated banks and insurers) *Berlin · team across Germany and New York*

- Designed query builders, big-data pivot tables and filter logic.
- Defined design-system behavior and implementation specifications for the new analytics platform, including custom easing curves, small in-product animations and transitions.
- Established user research in a restricted enterprise environment, including in-person sessions with US banking and insurance customers, and brought the evidence into roadmap decisions.
- Led UX across Germany and New York with two UX designers reporting.

UX Strategy Lead

2014 – 2016

Spreadshirt (international print-on-demand marketplace) *Leipzig, Germany*

- Led a nine-month seller-experience redesign for a platform connecting business sellers with a large consumer marketplace; research with shop owners changed an automation-first product direction.
- The mobile product-designer prototype moved into production.

AI WORK IN PRODUCTION

Two things I built hands-on that reached real users.

Viewer-services AI reply assistant, Bibel TV — Built 2025
Built the assistive drafting tool and ran its introduction, including 1:1s. Staff read each letter, use the draft by choice and decide what gets sent; in the team's experience, complex multi-topic letters take minutes instead of hours.

Selah for macOS — Independent product
Designed and agentically engineered a shipped Mac app, authoring pull requests that were merged and released to production.

EARLIER CAREER PROGRESSION

Product & UX Strategist · *Hypoport hub SE* · 2021 – 2022 · Berlin / Lübeck · productized bespoke internal services through workshops and reviews

Independent Product Design Consultant · *Oratio&Co* · 2016 – Present · Remote · product strategy, UX direction and working prototypes

Senior Mentor · *CareerFoundry* · 2016 – 2026 · Remote · mentoring and coaching product designers

Earlier · *UX Manager, UX Designer, Web Designer & Front-End Developer* · 2009 – 2014 · Pennsylvania, USA · e-commerce, product design, HTML, CSS and JavaScript

EDUCATION

M.A. Leadership
Kairos University, South Dakota, USA
Completed 2026

LANGUAGES

German · native

English · C2, fluent

SKILLS

Product and UX/UI design

Figma · end-to-end product ownership · high-fidelity responsive design · native mobile experiences · visual design · design principles · information architecture · complex workflow tools

AI-first experiences

AI-first user flows · editable generated output · human-in-the-loop workflows · AI-assisted design and prototyping · Claude Code · working prototypes against real APIs

Research and analytics

user interviews · usability testing · AI-assisted synthesis · domain learning · problem framing · product analytics · GA4 · business KPIs · Looker Studio

Design systems and delivery

design-system contribution · Figma Variables · Storybook · design tokens · Style Dictionary · motion and easing in the system · design critique · explaining design choices · cross-functional tradeoffs · implementation review

Technical fluency

HTML and CSS · JavaScript · Git and CI · agentically engineered React, SwiftUI and Kotlin prototypes

Languages and base

German native · English C2 · Berlin-based · German / EU work authorization
